

*“Innovative agricultural techniques to boost
entrepreneurial skills of future farmers”
nr. ref. 2020-1-IT01-KA202-008505*

C3 - Valea lui Mihai Romania

Sept.25th –Oct 1st. 2022

Work experience in the farm;

Innovative agricultural experiences in the field of circular economy

Agriculture has reached a point, where it is absolutely necessary to introduce new, innovative elements that will allow this economic activity to continue in a profitable and sustainable way.

- ▶ Digital agriculture can improve the circular economy.
- ▶ Modern agricultural machinery can contribute greatly to the gains of the circular economy in terms of reducing waste and re-using agricultural residues during the food production process.
- ▶ The use of intelligent, efficient and connected agricultural machinery will allow for the precise and optimized use of resources in a given area, taking into account, for example, a specific soil composition or a depth of the water layer.
